1) Create Student database

    use studentDB;
    db;
    db. CreateCollection ("student")

<u>Insert</u>

    db. Student. insert ({ Rollno : "1", Age: "21",
         Contactno: "8867568456", Email-Id : "1Bm16Cr009@13mCE. ac.in});

db. student. insert ({ Roll no : "10", Age : "21", Contact-no:
                                     9408675684",

     Email ID : " abc@bmsce.ac.in });

<u>update</u>

    db. student. update ({ no Rollno : "10" }, { $set : { Email id:
                          abc.cs17@bmsce.ac.in" } });

<u>Replace</u>

<u>Export</u>

mongo Export -- dbtest -- collection student -- csv - field file
         d : \ Fields.txt --- out d : \output. txt

<u>Drop</u>

    db. student. drop ();

<u>Import</u>

mongo import --- dbtest -- Collection Sample csv -- type csv --
    header line -- fid d : \ sample. txt.
